

# We Recondition Warren Pumps

It's just like new and considerably less expensive

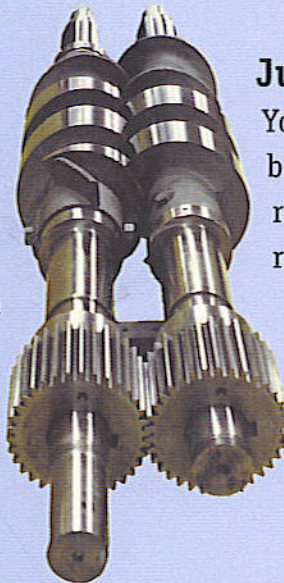

## We keep you going

We'll help you cut capital investment, just as we've helped major paper mills throughout the Pacific Northwest- without slowing down production. We can supply you with one of our pumps on exchange while we're rebuilding yours.

## Thorough care, in a hurry

From teardown and technical analysis through the final test run, all work is done in our shops, using our time-tested procedures.

## Just how you wanted it

You'll get your pump back with housing bores machined or ground. We check rotors and shafts for cracks, and either replace or repair (by remachining and welding) them. We supply and install NCB packing sleeves for longer life, and greater serviceability.
